March 2010 - No.15

### DIGITAL PROTOTYPING FOR PROCESS EQUIPMENT DESIGN

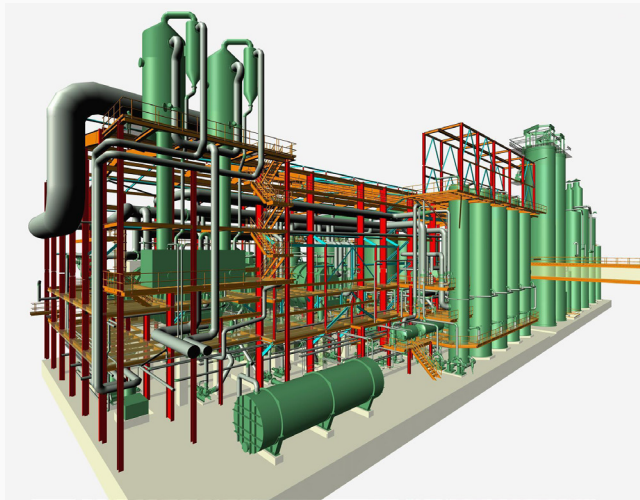

Fives Cail's complete integration of 3D design software has improved the quality and speed of the conception phase and has streamlined process equipment manufacturing. As the plans can be sent out to Fives Cail's workshops and/or suppliers around the world, the parts are manufactured with confidence while reducing costs and production times.

Autodesk Inventor© provides a comprehensive set of tools for 3D design and documentation as well as design validation and data management.

It is also fully interconnected with Intergraph SmartPlant 3D©. These advanced plant design software packages are especially dedicated to the design of complete sugar plants or workshops within Fives Cail's conception platform. They provide all the capabilities required to both design plants and maintain them in "as-built" condition throughout their life cycles.

Thanks to Fives Cail's optimized design processes, its engineering and design offices are able to offer reactive and efficient service to its customers.
